EDUCATION

Indian Institute of Technology, Bombay | Aug 2022 – May 2026 | GPA: 8.55/10
Major in Chemical Engineering, Minor in Management

PROFESSIONAL EXPERIENCE

Project Manager - Procter & Gamble | Jun 2026 – Present

- Led capital projects at P&G end-to-end, from feasibility and design through funding, fabrication, and startup, working across cross-functional teams as the scope evolved.
- Managed 2 concurrent capital projects, a new export sachet line and a selenium-based technology rollout, alongside a plant area revamp.
- Delivered ₹3+ crore in capital projects, owning budget, timeline, and feasibility together.
- Ran execution using P&G's EWP methodology, a structured framework roughly on par with PMP-level project certification.

Founder – MagiLabs (AI Solutions Studio) | Nov 2025 – Mar 2026

- Founded an applied AI studio building autonomous agents for real-world use; shipped 2 production AI systems, generating $2K+ in early revenue.
- Built a Text-to-Video agent with planning, generation, and self-evaluation loops, achieving 92% human-approval without rewrites.
- Built a CCTV video-intelligence agent quantifying teacher energy and engagement via movement entropy and interaction frequency, with 90%+ detection reliability.

Product Management Intern – Remedo (Healthcare SaaS) | Nov 2025 – Mar 2026

- Built a GTM strategy for ConvertLens by analyzing clinic usage data in SQL, finding that DSOs had 3x higher LTV but 40% lower adoption than solo clinics.
- Improved activation by 20% by fixing a 30% drop-off at the "demo-to-trial" stage with a new nurture sequence.
- Authored a 5-page PRD for "AI Patient Recall", cutting user drop-off by 20% and defining 15+ user stories.

Product Supply Intern - P&G (Received PPO**)** | May 2025 – Jul 2025

- Spearheaded an internal ML control-logic product (95% prediction accuracy), generating $700K in annualized value by cutting material waste to a record-low 0.4%.
- Benchmarked 5+ global sites, partnered with engineering and data science to scope and ship 3 new product features
- Validated a new production system via 30+ A/B tests and live plant trials, ensuring 100% stability and a zero-incident rollout to 50+ operators.

Startup Engagement & Partnerships Head | The Entrepreneurship Cell, IIT Bombay | Apr 2024 – Feb 2025

- Architected a national entrepreneurship ecosystem from scratch with high autonomy and no existing template, scaling impact across 99,000+ students and 3,000+ startups.
- Pioneered E-Cell's first junior entrepreneurship initiative aligned with India's National Education Policy, researching an unfamiliar market (small-town school outreach) and driving 1L+ registrations through build-challenges and structured competitions
- Negotiated 4M in partnerships with CBSE, state governments, and 25+ institutions (+33% YoY); built and launched "Seed Stars," a lightweight system connecting 300+ startups with 20+ VCs, helping 5+ startups secure 50L+ in funding.

KEY PROJECTS

Mumbai Flood Warning System | **Climate Studies, IIT Bombay** | Sep 2023 – Apr 2024

- Launched a multi-platform (Web, iOS, Android) flood warning system with MCGM, delivering real-time hyperlocal 3-hourly/3-day rainfall forecasts to Mumbai residents.
- Distilled the underlying ML models into a simple, user-facing "hyperlocal forecast" feature so residents could act on it without needing to interpret raw data.
- Led product-engineering collaboration for a 20+ member team, aligning MCGM and HDFC ERGO, and shipping the MVP across all platforms.

PII Sanitizer for LLM Chat Tools | *Personal project*

- Built a local-only privacy tool for Claude.ai and ChatGPT (Chrome extension + FastAPI/Presidio backend), detecting and redacting PII before it leaves the user's machine
- Detected 10+ PII categories (emails, phone numbers, SSNs, cards, addresses, names) plus custom regex recognizers for API keys/tokens across 6 providers.
- Extended redaction to file uploads by adding OCR support for scanned PDFs and images, with a fallback heuristic that caught fragmented PII in low-quality scans.
- Shipped with zero external API calls, fully local inference, open-sourced under MIT.
